

# Your Microsoft Account

## NEEDS PROTECTION!

Keep your business' M365 critical data your business.

### Where are we now:

The post 2020 landscape introduced organizational changes across the globe and impacted all industries. Employees are logging in from varying places more than ever before and bad actors have taken full advantage of this disruption – with data breaches up by 775% since 2017!

### What is the challenge:

Cyber attacks are not only becoming more sophisticated but increasingly targeting smaller businesses because they know business owners don't always have the baseline security and time needed to defend against these threats.

### Did you know?:

- On average, 1.2 million accounts get compromised every month
- According to Microsoft, 99.9% of hacked accounts didn't use MFA and only 11% of all accounts have MFA enabled
- \$4.62 million is the average cost of a ransomware security breach, and that's not counting the loss of trust and reputation for current and potential customers

### Why change:

Your business relies on M365 to run day-to-day operations. What would happen if you no longer had access to your emails, files, SharePoint, or Teams because there were no security measures in place? It's time to get serious about Microsoft Security and be proactive with your cyber defense.

Managed security is your best defense against the cyber threats of today. Yesterday's protocols are no longer enough to protect you and your customers data from the hackers of today.

### How we can help:

Upgrade your MS security strategy from reactive to proactive when you sign up for enhanced security services. You'll receive:

- Protection against 99% of attempted breaches with MFA management & alerting and additional updated security configurations
- On-going monitoring to know exactly which users, settings or policies are currently putting your organization at risk at any given time – whether in office, working from home or anything in between
- Reporting to see the threats you've been protected against with our risk reports to understand exactly how you're being targeted and guarded. QBR reports provide insight on your overall security score and charts your progress over time
- Real time alerting that lets us easily detect and quickly respond to any immediate threats targeting your M365 environment no matter where they're coming from
